RETROFIT PROGRAM

# GO Sunwave

for the incredible benefits  
of LED lighting!

## Cut your energy consumption by up to 80%

Helping to reduce CO<sub>2</sub> emissions, slow global warming and lower environmental toxicity, LED lighting is the most energy efficient lighting on the market today. Compared to traditional fluorescent and incandescent lighting, it reduces energy consumption by 60-80%.

With Sunwave, you can enjoy all the benefits of LED lighting while improving your work environment and boosting your bottom line dramatically.

## Improve your work environment

LED lighting improves the quality of working environments by providing crisp, clean light. It is available in a wide variety of colours and intensities to complement virtually every work space, and it improves workplace safety significantly.

Unlike most conventional fluorescent lighting that contains dangerous materials such as mercury, LED lighting contains no toxic materials and is 100% recyclable.

## Boost your bottom line

With reductions in energy consumption of up to 80%, hydro bill savings can be quite dramatic with LED lighting... and those bankable savings are reflected directly on your bottom line. Moreover, LED lighting has a much longer service life than conventional lighting -- 10 years in many applications -- and lower maintenance cost. It marks the end of those fluorescent bulb and ballast changes every 2 or 3 years.

## Maximize your ROI with Ontario's RETROFIT program

When you install an energy efficient LED lighting system to increase the efficiency of your buildings and operations, you become eligible for cash incentives of up to 50% off your project costs.

## Book a complimentary No-cost LED Audit

Simply call Sunwave to book a complimentary No-cost LED Audit of your facility's electricity demand, based on your existing lighting. The Sunwave Energy Team will show you the difference in power demand -- as well as your energy consumption savings -- based on your facility use pattern. We will then apply to your local utility to register your building in the Ontario government's saveONenergy RETROFIT program and determine your rebate potential.

## The experience to make it happen

The Sunwave Energy Team is very experienced with the saveONenergy program and will ensure your facility benefits from this highly attractive incentive program, so as to minimize your cost and maximize your return.

The end result will be clean, efficient LED lighting throughout your facility at significant savings over real project cost... and your contribution to a sustainable energy future.

**Call now for your No-cost LED Audit!**

## Sunwave can do it all for you

Believing in a clean, sustainable energy future, Sunwave specializes in renewable energy supply, energy conservation and demand management. As such, we are the premiere supplier of energy efficient LED lighting solutions for the commercial, industrial and institutional sectors.

## One call is all it takes

**In addition to auditing your LED lighting requirements at no cost, Sunwave will:**

- calculate and show you your savings
- determine your rebates
- ensure your success with Ontario's saveONenergy RETROFIT program
- furnish genuine Sunwave branded LED lighting products
- provide professional installation
- arrange cash-positive financing
- manage your saveONenergy program rebates

Sunwave is more than a source of energy for your business. We care how energy is consumed and how it affects the environment.

## Minimize your cost and maximize your return with an energy efficient LED lighting installation from Sunwave.
